

Inspect- I1

KARLVILLE

The i1 model operates in forward & backward directions with memory functions to return roll to defect position. The machine operates at 300 meters / min and is designed for shrink sleeve inspection process without in-line continuous perforations.

A strobe synchronized by photo sensor is a standard accessory. Flexible packaging and adhesive label materials may be inspected with lay-on roller option.

Machine Specifications

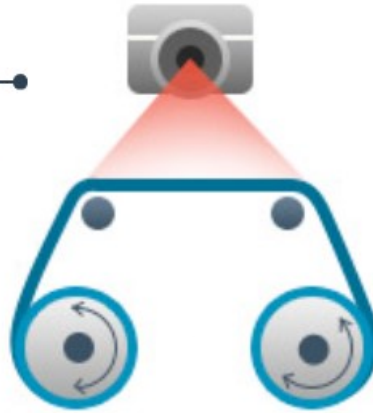

Description	Spec
Speed	40 m/min
